AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the

application. Please amend the claims as follows:

1. (Currently Amended) Process for the preparation of storage-stable, multiple

emulsions of the water/oil/water (W/O/W) type which comprise one or more active

ingredients with the steps

a) stirring the active ingredient into an aqueous phase,

b) emulsifying the aqueous phase by passing the aqueous phase through a

largepored, porous membrane into an oil phase, wherein the aqueous and oil phases

are heated to a temperature of from 30°C to 35°C before said emulsification, and

c) phase inversion of the heated emulsion from b), by cooling the mixture at a

cooling rate of at least 0.3 K/min, where an emulsifier is added either to the aqueous

phase in a) or to the oil phase in b) or to both phases.

2. (Previously Presented) Process according to Claim 1, characterized in that wherein the

membrane used is a porous inorganic membrane.

3. (Previously Presented) Process according to Claim 1, wherein the pore size of the

membrane used is 0.2 to 5 μm.

4. (Previously Presented) Process according to Claim 1, wherein the oil used for the oil

phase is a substance chosen from the series mineral oil, white oil or vegetable oil.

3

Application Serial No.: 10/578,329

Inventor(s): Stange et al.

Attorney Docket No.: 2901652-000004

5. (Previously Presented) Process according to Claim 1, wherein the emulsifier used is a

nonionic emulsifier which is initially introduced in the oil phase.

6. (Canceled)

7. (Original) Process according to Claim 1, wherein the phase inversion according to step

c) is carried out at a cooling rate of at least 1 K/min.

8. (Previously Presented) Process according to Claim 1, wherein the pressure difference

over the membrane is $0.5*10^5$ Pa to $25*10^5$ Pa.

9. (Previously Presented) Process according to Claim 1, wherein the process is carried out

continuously in all steps.

10. (Previously Presented) Process according to Claim 1, wherein the active ingredient is a

pharmaceutical active ingredient.

11. (Currently Amended) Process according to claim 10, wherein the active ingredient

comprises an antigen or a preparation which comprises a peptide chain.

12. (Withdrawn) Multiple emulsion of the W/O/W type obtainable from a process

according to Claim 1.

13. (Cancelled)

14. (Currently Amended) Process of according to Claim 1, wherein said membrane is a

ceramic membrane.

15. (Currently Amended) Process of Claim 14, wherein said ceramic membrane comprises

aluminum oxide, zirconium oxide and/or titanium oxide.

16. (Currently Amended) Process of according to Claim 1, wherein the pore size of the

membrane is 0.3 to 3 µm.

17. (Currently Amended) Process of according to Claim 10, wherein said active ingredient

comprises an active ingredient for veterinary purposes.

18. (Currently Amended) Process of according to Claim 10, wherein said active ingredient

comprises an antigen for vaccine formulation.

19. (Currently Amended) Process of according to Claim 11, wherein said antigen comprises

a virus or a microorganism and said peptide chain comprises a protein or a glycoprotein.

20. (Previously Presented) Process according to Claim 10, wherein the active ingredient

comprises at least one of the bacterium, a parasite, a glycoprotein which has been obtained

from a microorganism, a synthetic peptide, and/or a protein or peptide which has been prepared

by genetic manipulation.
